Code Review Report

Prepared by FusionHawk for Anarock Property Consultants Pvt. Ltd. Scope: repository fusionhawk/Anarock, main @ 21cf217 | Date: 2026-10-16

1. Summary

Codebase: Next.js 14 (App Router) in anarock/, ~9.4k lines in API routes and lib. Maintainability is the main concern: duplicated lead endpoints, heavy commented-out code, no automated tests, and several SoW integrations not yet present. No change from the 2026-10-10 review beyond the added scope document.

Scope reference: *Anarock CLA Online Listing Platform Scope* (docx in repo). Zoho CRM org 'Anarock Property Consultants Pvt. Ltd' (production, Professional edition) was reachable through the AnarockCRM connector. This assessment is a static review of the code in the repository plus npm audit; no dynamic/penetration testing was performed.

2. Findings

ID	Area	Observation	Recommendation
C-01	Duplication	Three lead handlers (leads 1044 lines, lead2 512, lead3 1476) with duplicated validation, Zoho token and duplicate-handling logic.	Extract shared lib (validation, Zoho client) and keep one route.
C-02	Dead code	Large commented-out blocks: properties/route.js ~1,221 comment lines of 2,341; kyc/route.js 126; micromarkets/route.js.	Delete (git history preserves it).
C-03	File size	properties/route.js is 2,341 lines mixing parsing, filtering, ranking, caching and mapping.	Split into services (propertyService.js is an empty file).
C-04	Empty module	src/lib/propertyService.js is 0 bytes.	Implement or remove.
C-05	Tests	No unit/integration tests; no CI config; lint only.	Add Jest/Vitest for lib/ and API routes, Playwright for flows, GitHub Actions.
C-06	Config	Table IDs defaulted to hard-coded values; Windows path in catalyst.json ('D:\\Catalyst\\anarock'); run-dev.bat committed.	Use relative paths and env-only config.
C-07	Caching	In-memory caches (properties, lead rate limit) are per-instance; stale behaviour on serverless.	Use Catalyst Cache / revalidation tags.
C-08	Scope gap	SoW items not present in repo: Gemini attribute generation, CRM-to-Stratus sync, Catalyst Search, SalesIQ, PageSense, GA4, view-count scoring, unit switch (ft/m/sq ft/sq m), on-demand revalidation, JSON-LD for listings. Implemented: SSR pages, sitemap/robots, currency switch (5 currencies), CRM leads, city/micromarket lookup, KYC pages, compare, wishlist (client-side).	Track remaining scope; functions/ folder referenced by README is not in the repo.
C-09	Docs	README previously referenced functions/anarock_function and a missing .catalystrc layout.	Updated in this run.
C-10	Positives	Clear App Router structure, shadcn UI kit, SEO basics (sitemap, robots, metadata), defensive input validation in leads route, cache headers on read APIs.	-

3. Scope coverage

SoW item	Status in repo
SSR property listing/detail	Present
Sitemap / robots	Present
Lead to Zoho CRM	Present (3 variants)
Currency switch	Present
Unit switch (ft/m/sqft/sqm)	Not found
Catalyst Search / AI semantic search	Not found (prompt param handled in properties API)
Gemini AI attributes, Stratus sync, SalesIQ, PageSense, GA4	Not found
View-count scoring to CRM	Not found
